

## Understanding Principles of Infection Control

- 1) What is the difference between Pathogen and a nonpathogen?
- 2) What are the classifications of bacteria by shape?
- 3) Where are most protozoa found?
- 4) What are the two common forms of fungi?
- 5) What is the definition of parasitic?
- 6) What two classes of organisms are parasitic?
- 7) What two viruses are of major concern to health care workers?
- 8) Name four requirements for microorganisms to grow and reproduce.
- 9) What are some ways pathogens cause infection and disease?
- 10) What six factors make up the chain of infection?
- 11) Identify some ways to break the chain of infection. (3 ways)
- 12) What is the difference between antiseptics, disinfection, and sterilization?
